

FERTINET®

Professional & Support Services

**Network Visibility
Optimisation & Configuration**

**Increase Revenue and Customer Value With
Exclusive Networks Professional & Support Services**

According to Gartner research, 99% of firewall breaches through 2023 will be due to firewall misconfigurations, not product flaws.

When you transition from a legacy firewall to a Fortinet Fortigate next-generation firewall, you inherit a large number of port-based rules that allow any application on the ports, which increases the attack surface because any application can use an open port.

Our Network Visibility Optimisation & Configuration Service expedites your migration from port-based rules to UTM based profile rules to reduce the attack surface and safely enable applications on your network.

Many organisations do not fully implement the capabilities of their Next-Generation Firewalls, leading to gaps in security. Exclusive Networks will measure your NGFW security management capabilities across your deployment, quickly identify the most critical security controls, enabling you to make adjustments that maximise your return on investment & strengthen security.

How it works

1. An Exclusive Networks consultant will work with you to convert a select number of target rules from standard firewall policies to UTM based policies. The target rules will be based on your prioritisation.
2. The Exclusive Networks consultant will provide a knowledge transfer on the rule enhancement process throughout engagement.
3. Implement changes & resolve configuration security gaps based on your policy

Deliverables Summary

- Conversion from protocol/port legacy rules to UTM policies.
- Knowledge transfer of the UTM profile configuration process.
- Identify security gaps within your configuration.
- Resolve security gaps & enable features based on your prioritisation.
- Provide measurable report for your best practice implementation
